                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; STCP-1; chemokine activity; T-cells; treatment; HIV infection; inhibitory compound; assay; reduce; circulatory system STCP-1 level; joint inflammation; rheumatoid arthritis; lupus.
                                                                                                                                                                                                                                             A new macrophage derived chemokine, MDC, a member of the C-C (Cys-Cys) subfamily of cytokines has been isolated. MDC and it's analogues may be used in the treatment of inflammatory diseases especially diseases characterised by monocyte chemotaxis towards a site of inflammation. MDC and it's analogues also induce fibroblast proliferation having a positive effect in wound healing, and treatment of tumours, by directly or indirectly inhibiting tumour formation. Antibodies directed against MDC and its analogues may be used in the treatment of Crohn's disease, rheumatoid arthritis and atherosclerosis. Probes and/or primers for the identification of MDC encoding sequences can be derived from MDC encoding sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human STCP-1 polypeptides with chemokine activity - useful e.g. to treat HIV infection or other viral or bacterial pathogens infecting T-cells, macrophages or other immune system cells
                                                                                                               Macrophage derived chemokine (MDC) and analogues - used in the treatment of inflammatory diseases, MDC antibodies used to treat Crohn's disease, rheumatoid arthritis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 93;

The present sequence represents human STCP-1. STCP-1 polypeptides demonstrate chemokine activity for T-cells. The polypeptides are useful prophylactically or therapeutically to treat HIV infection and other conditions associated with viral/bacterial pathogens infecting T-cells, macrophages or other immune system cells. They can be included corrigionally chemically modified) with a pharmaceutically acceptable carrier and optionally other pharmaceuticals (e.g. AZT, antibiotics etc.) in therapeutic compositions for treating these conditions. STCP-1 also system STCP-1 levels to alleviate e.g. joint inflammation associated with rheumatoid arthritis, lupus or other autoimmune diseases. The nucleic acids are also useful to prepare antibodies or hybridomas. The nucleic acids are useful to propare antibodies or hybridomas. The nucleic acids are useful to produce hybridisation probes to test for STCP-1 DNA/RNA in mammalian samples.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the macrophage-derived chemokine (MDC). This protein is used to produce the antibodies of the invention. The antibodies are useful for purifying MDC polypeptides, for detecting endogenous MDC in a host, and for modulating binding of MDC to its receptors. The DNA encoding this sequence can be used for identifying and
                                                 Nucleic acid sequences encoding the chemokines can be used for detection, in e.g. forensic techniques. Antibodies and other binding agents may be used in diagnostics. The chemokines themselves are useful for treatment of, e.g. cancer or degenerative conditions. Abnormal proliferation, regeneration, degeneration or atrophy may be treated by the inventive

This belongs to the CC class of chemokines. The efficacy of a vaccine is enhanced by combining it with one or more chemokines to enhance the immune response to an antigen. This can be humoral or cell-mediated immune response purified chemokines, fragments, derivatives or analogues are administered either concurrently with one or more purified antigens against which an immune response is desired or within a time period either before or after antigen administration. The chemokine gene is
                            for treating inflammatory disorders, cancer, etc. Antagonists of MDC can be used for treating Crohn's disease, arthritis, atherosclerosis etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               isolated by PCR, and administered by constructing an expression plasmid vector which can be expressed in a coordinated manner upon introduction in a suitable cell. The vacçines are immunostimulatory and can be used to treat microbial diseases especially HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Macrophage-derived chemokine; MDC; vaccine; immune response; antigen; humoral response; cell-mediated response; PCR; immunostimulatory; expression plasmid vector.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a novel human C-C chemokine, designated macrophage derived chemokine (MDC) that binds to the CCR4 chemokine receptor. The invention provides vertebrate MDC polypeptides (see also AAYOS976, AAYOS877 and AAYOS880) and isolated polypeptides (see also AAYOS976, AAYOS877 and AAYOS880) and isolated polypeptides encoding them, vectors and host cells, and methods of for the recombinant or synthetic production of MDC. Also provided are MDC analogues, antibodies and antagonists. The MDC antagonists are used for the preparation of medicaments for the suppression of the proliferation of anammalian immunodeficiency virus, for inhibiting platelet aggregation in a mammal, for inhibiting DAC-induced activation, chemotaxis or proliferation of cells that express CCR4, for inhibiting or palliating an allergic reaction in a mammal, and for treating asthma (all claimed). MDC polypeptides are also used in claimed vaccine compositions.

The specification described a method of modulating the trafficking of systemic memory T cells in the method of modulating of comprises administering a CCR4 modulating agent. It has been found that systemic administering a CCR4 modulating agent. It has been found that systemic T cells such as express high levels of CCR4. Ligands of CCR4 such as TARC (thymus and activation regulated chemokine) and MDC (monokine derived chemokine) act as an adhesion trigger and, upon CCR4 binding, these cells undergo integrin dependent arrest to the appropriate vascular receptors. This arrest acts to localize the cells at the chemotaxis to affect the localization of T cells in targeted tissues. The active agent may be a CCR4 agonist that acts to enhance T cell localization. Alternatively, it may be an antagonist that blocks CCR4 biological activity. A CCR4 atagonist may be administered for the treatment of inflammation. The present sequence represents a human MDC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This represents a human macrophage derived chemokine (MDC). The invention provides a novel method of treating or preventing lentivirus (LV) infection or replication in a human subject, that comprises administering to the subject a composition comprising MDC or a derivative of MDC, or a nucleic acid encoding MDC or a derivative of MDC. The products can be used for treating or preventing LV infection or replication, particularly HIV infection or replication. The products can also be used for the prognosis for a LV infection, particularly an HIV infection using the MDC as a prognostic indicator. The methods can also be used with other LV9, e.g. simian immunodeficiency virus, feline immunodeficiency virus and bovine immunodeficiency virus.

The present sequence represents a novel human macrophage-derived C-C chemokine (MDC) of the invention. Chemokines comprise a family of small secreted proteins which attract and activate leukocytes, thereby aiding in the stimulation and regulation of the immune system. C-C cytokines are chemotranis. The invention comprises a novel human MDC protein and nucleic chemotranis. The invention comprises a novel human MDC protein and nucleic acids, as well as methods for the production of the MDC protein. The MDC infection, inflammation, and other sites having C-C chemokine receptor molecules. Inhibition of MDC is believed to be useful in treating diseases involving macrophages (e.g. Crohn's disease, rheumatoid architis or atherosclerosis). Alternatively, augmenting the effects of MDC is believed to be beneficial towards wound healing and anglogenesis. Also MDC or MDC agonists may be beneficial to patients receiving chemotherapy or radiation therapy and in the treatment of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                ^{1s}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Macrophage derived C-C chemokines useful in medical imaging and for the development of agents for controlling inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                           note= "Mature macrophage-derived C-C chemokine, this

AAW07604 shows human chemokine beta-13 (Ck-beta-13), a member of the C-C (Cys-Cys) branch of intercrine chemokines. Ck-beta-13 is useful for treating patients lacking chemokine beta-13 by gene therapy. Ck-beta-13 stimulates the invasion and activation of host defence cells making it useful for treating solid tumours, e.g. Kaposi's sarcoma, and for chemokine to acute and chronic infections, e.g. mycobacterial chections. The chemokine induces chemotactic migration of monocytes, neutrophils, eosinophils, T lymphocytes, basophils and fibroblasts to sites where they are needed. Bosinophils may be attracted to the site of a parasitic infection to kill parasite larvae. Ck-beta-13 also recruits debris-clearing and connective tissue promoting inflammatory calls, and is therefore used to stimulate wound healing, prevent scarring and treat liver cirrhosis, osteoarthritis and pulmonary fibrosis. Ck-beta-13 may also be used for treating leukaemia, T-cell mediated autoimmune diseases, psoriasis, to regulate haematopolesis and to inhibit anglogenesis. Ck-beta-13 antagonists inhibit activity of the

intographone in the polypeptide and nucleic acid are useful in diagnosis invention: The polypeptide and nucleic acid are useful in diagnosis and treatment of immune system-related disorders in mammals (preferably humans). Such disorders include tumours, cancers, interstitial ung disease and disorders include tumours, cancers, interstitial lung disease and disorders include tumours, cancers, interstitial ung mammals with nancer of immune system express enhanced/decreased levels of CKbeta-13 and mmune system express enhanced/decreased levels of CKbeta-13 and mnune system expression and comparing to achieved by assaying CKbeta-13 gene expression and comparing to achieved by assaying CKbeta-13 gene expression and comparing to pharmaceutical compositions e.g. to treat immune system-related disorders as above, treat sepsis, inhibit bone marrow stem cell colony formation during cancer therapy, regulate haematopoiesis, stimulate wound healing etc. Compositions comprising the polymorleatides may also be administered, especially to express CKbeta-13 polypeptide in hosts to creat dysfunctions associated with aberrant endogenous CKbeta-13.
                                                                                                                                       ö

CKbeta-13 polypeptides and polynucleotides are useful for treating deficiencies or disorders of immune systems, haematopoletic cells, autoimmune disorders such as Addison's disease, haemolytic anaemia, rheumatic arthitis, dermatitis, allergic encephalomyelitis, glomerulonephritis, Goodpasture's Syndrome, Grave's Disease and multiple
                                                                                                                                                                                        9
                                                                                                                                                                                                                      9
chromosomes/chromosome sites. The polypeptides are useful to screen for agonists and antagonists of CKbeta-13 activity. The antibodies are useful diagnostically or therapeutically e.g. as antagonists to treat subjects requiring CKbeta-13 reduction.

                   The present sequence represents a synthetic analogue of the novel human macrophage derived C-C chemokine MDC (see also AAY05871). The analogue has an amino acid substitution at residue 2 of the mature polypeptide. MDC analogues (see also AAY05872-75) are expected to be antagonists of MDC, inhibiting activity by competitively binding to the receptor that recognises MDC or forming inactive heterodimers with MDC. MDC antagonists are used in claimed methods for the preparation of medicaments for the suppression of the proliferation of a mammalian immunodeficiency virus, for inhibiting platelet argyfregation in a mammal, for the treatment or palliation of lupus erythematosus in a mammal, for inhibiting MDC-induced activation, chemotaxis or proliferation of cells that express CCR4, for inhibiting or palliating an allergic reaction in a mammal, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MARLQTALLVVLVLLLAVALQATEAGPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSC

```
correct themotive receptor. Macaque MDC shows about 94% amino acid sequence identity to human MDC. The invention provides vertebrate sequence identity to human MDC. The invention provides vertebrate MDC polypeptides (see also AAY0897), AAY08975 and AAY0897) and isolated polynucleotides encoding them, vectors and host cells, and methods for the recombinant or synthetic production of MDC. Also provided are used for the preparation of medicaments for the suppression of the preparation of medicaments for the suppression of the preparation of medicaments for the treatment or pallation of lupus erythematosus in a mammal, for inhibiting more agreement or pallation of lupus erythematosus in a mammal, for inhibiting more inhibiting or pallating an allergic reaction in a mammal, and for treating asthma (all claimed). MDC polypeptides are also used in claimed vaccine compositions.
                                                                                                                                                                                                                                                                                                                                        The present sequence represents a novel macaque C-C chemokine, designated macrophage derived chemokine (MDC), that binds to the

Patent No. 5932703
GENERAL INFORMATION:
APPLICANT: Godiska, Ronald
APPLICANT: Gray, Patrick W.
TITLE OF INVENTION: MACROPHAGE DERIVED CHEMOKINE AND CHEMOKINE
TITLE OF INVENTION: ANALOGS
NUMBER OF SEQUENCES: 32
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 93;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ; DB 5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25 GPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWV 84
                                                                                                                                          Sequence 31, Application US/08660542
Patent No. 5932703
GENERAL INFORMATION:
GROGISKA, Ronald
APPLICANT: Gray, Patrick W.
TITLE OF INVENTION: MACROPHAGE DERIVED CHEMOKINE AND CHEMOKINE
TITLE OF INVENTION: ANALOGS
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 69;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                          E: Marshall, O'Toole, Gerstein, Murray & 6300 Sears Tower, 233 South Wacker Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.30
APPLICATION NUMBER: US/08/660,542

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chemokine receptor 4.";
J. Biol. Chem. 273:1764-1768(1998).

-! Biol. Chem. 273:1764-1768(1998).

-! FUNCTION: MAY PLAY A ROLE IN THE TRAFFICKING OF ACTIVATED/EFFECTOR

T LYMPHOCYTES TO INFLAMMATORY SITES AND OTHER ASPECTS OF ACTIVATED

T LYMPHOCYTE PHYSIOLOGY. CHEMOTACTIC FOR MONOCYTES, DENDRITIC
CELLS AND NATURAL KILLER CELLS. MILD CHEMOATTRACTANT FOR PRIMARY
ACTIVATED T LYMPHOCYTES AND A POTENT CHEMOATTRACTANT FOR CHRONICALLY ACTIVATED T LYMPHOCYTES BUT HAS NO CHEMOATTRACTANT
                                                                                                  ACTIVITY FOR NEUTROPHILS, EOSINOPHILS, AND RESTING T LYMPHOCYTES.
BINDS TO CCR4.
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN MACROPHAGE AND IN
MONOCYTE-DERIVED DENDRITIC CELLS, AND THYMUS. ALSO FOUND IN LYMPH
MONOCYTE-DERIVED DENDRITIC CELLS, AND THYMUS. ALSO FOUND IN LYMPH
MACROPHAGES. LOWER EXPRESSION IN LUNG AND SPLEEN. VERY WEAK
EXPRESSION IN SMALL HYPESTINE.
SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MARLQTALLVVLVLAVALQATEAGPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

"The genomic locus for the AMAC-1 gene contains possible pseudo-exons within the first intron sequence.";
Submitted (DEC-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS LYMPHOCYTES BUT NOT MONOCYTES OR GRANULOCYTES. MAY BE INVOLVED IN B CELL MIGRATION INTO B CELL FOLLICLES IN LYMPH NODES. ATTRACTS NAIVE T LYMPHOCYTES TOWARD DENDRITIC CELLS AND ACTIVATED MACROPHAGES IN LYMPH NODES, HAS CHEMOTACTIC ACTIVITY FOR NAIVE T CELLS, CD4+ AND CD8+ T CELLS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDILINE-97275308; PubMed-9129202;

                    -1- SUBCELLULAR LOCATION: Secreted.
-1- TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVELS IN LUNG, LYMPH NODES, PLACENTA, BONE MARNOW, DENDRITIC CELLS PRESENT IN GERMINAL CENTERS AND T-CELL AREAS OF SECONDAR LYMPHOID ORGANS AND MACROPHAGES
DERIVED FROM PERIPHERAL BLOOD MONOCYTE: NOT EXPRESSED BY PERIPHERAL BLOOD MONOCYTE: NOT EXPRESSED BY PERIPHERAL BLOOD MONOCYTE: TO-MACROPHAGE
DIFFERENTIATION IS A PREMEDULY EVENESSION.
-1- INDUCTION: SPECIFICALLY INDUCED IN MACROPHAGES BY IL-4, IL-13, AND IL-10. EXPRESSION IS INHIBITED BY IN-CAMAN WHILE GLOCOCORTICOIDS EXERT A SLIGHTLY POSITIVE SYNERGISTIC EFFECT IN COMBINATION WITH IL-4. STRONGLY INDUCED IN SEVERAL HUMAN CELL LINES, INCLUDING MONOCYTIC U937 CELLS, BY PHORBOL MYRISTATE ACETATE (PMA).
-1- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE CC) (CHEMOKINE CC).

-!- FUNCTION: CHEMOATTRACTANT FOR BLOOD MONOCYTES, MEMORY T HELPER CELLS AND EOSINOPHILS. CAUSES THE RELEASE OF HISTAMINE FROM BASOPHILS AND ACTIVATES EOSINOPHILS. BINDS TO CCR1, CCR3, CCR4 AND CCR5. ONE OF THE MAJOR HIV-SUPPRESSIVE FACTORS PRODUCED BY CD8+ T CELLS. RECOMBINANY RANTES PROTEIN INDUCES A DOSE-DEPENDENT INHIBITION OF DIFFERENT STRAINS OF HIV-1, HIV-2, AND SIMIAN IMMUNODEFICIENCY VIRUS (SIV). 6 TALLVVLVLLAVALQA-TEAGPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPG -!- INDUCTION: BY MITOGENS. -!- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE Gaps Proudfoot A.E.I., Wells T.N.C., ubkowski J.; The crystal structure of Met-RANTES: comparison with native RANTES "Total chemical synthesis and high-resolution crystal structure the potent anti-HIV protein AOP-RANTES."; Chem.
